The Bull Market in Precious Metals

Precious metals, such as gold, silver, platinum, and palladium, have a long history of serving as a safe haven for investors during periods of economic uncertainty.

During the bull market in precious metals that began in the late 1990s and lasted until 2011, the prices of these metals soared to record highs. This bull market was driven by a combination of factors, including:

- **Demand from emerging markets:** Growing demand for precious metals from emerging markets, such as China and India, also contributed to the bull market.

The bull market in precious metals came to an end in 2011, as the global economy began to recover and investors shifted their focus to other asset classes. However, the lessons that we learned from this bull market can still be applied to today's investment environment.
